Product description

A set for testing the tightness of boost systems - TURBO.
Suitable for all pressure loading systems with flange connections. Used to detect leaks in turbocharging system components such as turbochargers, pressure hoses, intercooler, etc.

Diagnostics takes place with the engine turned off and built-in diagnosed components.
The device can be conditionally used to verify the EGR valve. It operates on the compressed air system using a standard tire inflating gun.

- pressure limiting valve due to high test pressures
- test device with plugs with diameters 31, 38, 46, 51, 56, 61 mm
- suitable for many car brands, e.g. VW, Mercedes-Benz, Renault, Nissan, etc.
