Product description

The device protects all electronic systems in the car from the adverse voltage during welding, grinding, etc.

Secure the main driver car drivers: ABS, injection, air conditioning, alarm, immobilizer and other electronics before permanent damage.

We need not disconnect the battery which resulted in the loss of data (radio, NAVIGATION, on-board computer settings).

The device was designed to safely use:

- Fully insulated terminals
- Properly selected cross sections
- Signaling proper connection
- Sound signaling during surge

Manual:

1. Podłączyć czerwony terminal urządzenia (+) do zacisków podłączonych do dodatniego terminala baterii i czarny zacisk do ujemnego (-).
2. Zaświecenie diod LED na urządzeniu, zielone wskazuje na poprawne połączenie.
3. Zaświecenie czerwonej diody LED na urządzeniu i sygnał akustyczny wskazuje na odwrotną polaryzację. Zmiana dowolnego terminala podłączonego do baterii.
